

Stop working for your tools. Make your tools work for you. Welcome to the agentic era.

Our applications iSi Simpas Chatouille ilovemy.jobs yufi P4th

Fosses-la-Ville, 19 August 2026

Dear clients,

When I started in this profession nearly 30 years ago, I would never have imagined writing you a message like this one.

I have always been a developer at heart. What I love is not technology for its own sake, but solutions that simplify work and let my clients spend their time on what truly creates value.

Today we are entering a new stage: the agentic era.

An agent is not simply an AI you ask a question. It is an application able to work for you: search, check, use your tools, move information around, run procedures and, when it adds value, call on one or more artificial intelligences.

In a few weeks, we have accomplished a considerable amount of work. I wanted to share it with you first. And know this: this is only the beginning.

iSi

isiweb and MISI become iSi, the original name of our flagship application for temporary staffing. The new version offers a simpler, more intuitive and more modern interface. Both versions can run in parallel, with no impact on your operations. You can discover and adopt the new interface gradually, at your own pace, while continuing to work normally in your current environment.

Yufi

Yufi gives you a much more complete view of Belgian companies. We bring together in our databases information such as annual accounts, articles of association, websites, Google Business Profile and social networks. The aim: to help a salesperson, a recruiter or a director understand a company better before they act.

Chatouille

Chatouille is an assistant for analysis, research and evaluation. You give it a question or documents to study; it can have several AIs work with different roles, compare their answers, identify consensus and divergences, and help you see where the real added value lies. The goal is not only to get an answer, but to understand, compare, decide and build a solution.

ilovemy.jobs

With ilovemy.jobs, we want to rethink the meeting between a person and a company. We have developed our own approach: the Butterfly Method. Rather than simply matching a CV and a job offer, this method analyses the 360° FIT between the candidate and the company: what truly matches, the potential of the relationship, the strengths on both sides and the points that will need attention. And this reading works both ways: from the candidate to the company, and from the company to the candidate.

Simpas

Simpas is not an AI. It is a platform that lets a user or a team create their own business agent: an application that makes the company's applications work together. Instead of switching from one tool to another and repeating the same operations, you describe what needs to be done and you gradually build your own procedures. Simpas orchestrates your applications — CRM, ERP, emails, files, calendar, social networks or others — so that they work for you and for your team.

I know all of this may sound either incredible, or still hard to grasp until you have seen it work. The simplest path is therefore probably to show you.

In the coming days, we will send you links and short presentations so you can discover, at your own pace, each of these new concepts and each of our applications.

And of course, if a topic, an application or an idea interests you in particular, we can organise a meeting or a demonstration with you to look at it concretely in your context.

And now, our future projects

- Time and attendance management (obligation 2027)
- Flexi-jobs and planning
- An agent for alignment with social legislation
- Create a tailor-made application for a niche?
- Create a specialised agentic social secretariat for a sector?

We are looking for new development opportunities, and the limits recede every day.

After almost 30 years in this sector, I have rarely been so enthusiastic about what it is becoming possible to build.

See you very soon,

Pascal
